Summary

Motivated Computer Science undergraduate with a strong foundation in data structures, algorithms, and object-oriented programming. Experienced in building software projects using C++, Java, Python, and web technologies. Demonstrates strong problem-solving abilities and an interest in backend development and scalable software systems. Passionate about developing efficient applications while continuously improving technical skills through coding practice and hands-on projects.

Education

Vellore Institute of Technology

2024 – 2028

B.Tech in Computer Science

CGPA: 8.9 / 10

Technical Skills

Programming Languages: C++, Java, Python, JavaScript

Concepts: Data Structures, Algorithms, Object-Oriented Programming

Web Technologies: HTML, CSS

Tools: Git, VS Code

Projects

Fake News Detection System

Python

- Developed a machine learning based system to classify news articles as real or fake
- Implemented text pre-processing and feature extraction using NLP techniques
- Built a classification model to detect misinformation patterns in news datasets

Supermarket Billing System

C++

- Created a console-based inventory management and billing system with role-based access for clients and administrators
- Adopted product inventory control with add, update, delete, and search features
- Built an invoice generation system to automatically compute the whole purchase price and provide discounts.
- Persistent storage of product and transaction records using file management was applied

Login Interface

HTML, CSS, JavaScript

- Built a responsive login interface with client-side validation
 - Implemented user input handling and form validation using JavaScript
-

Coding Profiles

LeetCode: leetcode.com/u/1Jb6u0iq5c

GeeksforGeeks: geeksforgeeks.org/profile/gurpreetsil17k

Additional Skills

Public Speaking, Technical Writing, Research, Video Editing & Content Creation
